If necessary, we will change your selected shipping method to accommodate these items.

Most natural waters range from pH 4 to pH 9, but commonly are above pH 7 because of carbonates and bicarbonates (alkalinity). The pH of water used in industry, boiler feed water, and swimming pools usually is kept within a narrow range. Simply add indicator to the sample and compare the color to the spots on the color disc to measure pH.

**A wide range kit applicable to a variety of samples**

**A great option for fast, reliable readings**
