

CL17sc Calibration Verification Refill Kit

Product #:	8573200
ZAR Price:	Contact Hach
Ships within 3 days	

For users that already have the syringe, tubing, fittings, and ampule breaker from the CL17sc Calibration Verification Kit, this refill kit provides the deionized water and chlorine standard needed to verify calibration. The CL17sc Calibration Verification Refill Kit contains two bottles of deionized water (500 mL) and a chlorine standard (20 mL ampule).

The CL17sc calibration curve is set at the factory for performance to specifications. User adjustment of the factory calibration curve is only recommended in two instances: if required by a regulatory agency for compliance reporting purposes or if a large repair of the analyzer is done.

Specifications

Instrument:	CL17sc
